The German Blockchain Report 2022

SUMMARY: What are Real World Assets!? by @SQARES.com Research

Real-World Asset Tokenization: Unleashing the Multi-Trillion-Dollar Potential in the DeFi Sector

The Transformative Power of RWA Tokenization: A New Chapter for Traditional and Decentralized Financial Markets"

Recently, Real-World Assets (RWAs) have the potential to become the next big narrative in the crypto space. Tokenization of RWAs enables bridging the gap between traditional and decentralized financial markets by leveraging the benefits of blockchain technologies such as transparency, efficiency, and liquidity. By converting ownership rights of physical or financial assets into digital tokens, RWAs enable a new generation of innovative, fractional- and non-fractional- ownership, investment products.

Definition: Real World Asset = Physical Asset + NFT Technology: The impacts of RWA tokenization are extensive: enabling 24/7 trading on the blockchain, faster settlement, unlocking liquidity in previously inaccessible or illiquid markets, automating compliance, and creating new credit and investment opportunities. Experts predict that tokenization of illiquid global assets could lead to a market worth \$16 to \$68 trillion by 2030.

Numerous institutions, including ABN AMRO, Siemens, and Hamilton Lane, have successfully issued digital bonds and tokenized assets on public blockchains, indicating growing confidence in DeFi protocols. With the increasing adoption of RWAs, financial markets are witnessing innovative asset classes, offering lucrative opportunities and diversification alternatives for portfolios.

Tokenization of RWAs is a groundbreaking development that opens up new horizons for both traditional and decentralized financial markets. By collaborating across both sectors, RWAs could provide a significant capital and liquidity boost for the crypto ecosystem by making real assets tradable and laying the foundations for a dynamic, future-proof financial landscape.

What are „Real-World Assets“ – SHORT FACTS:

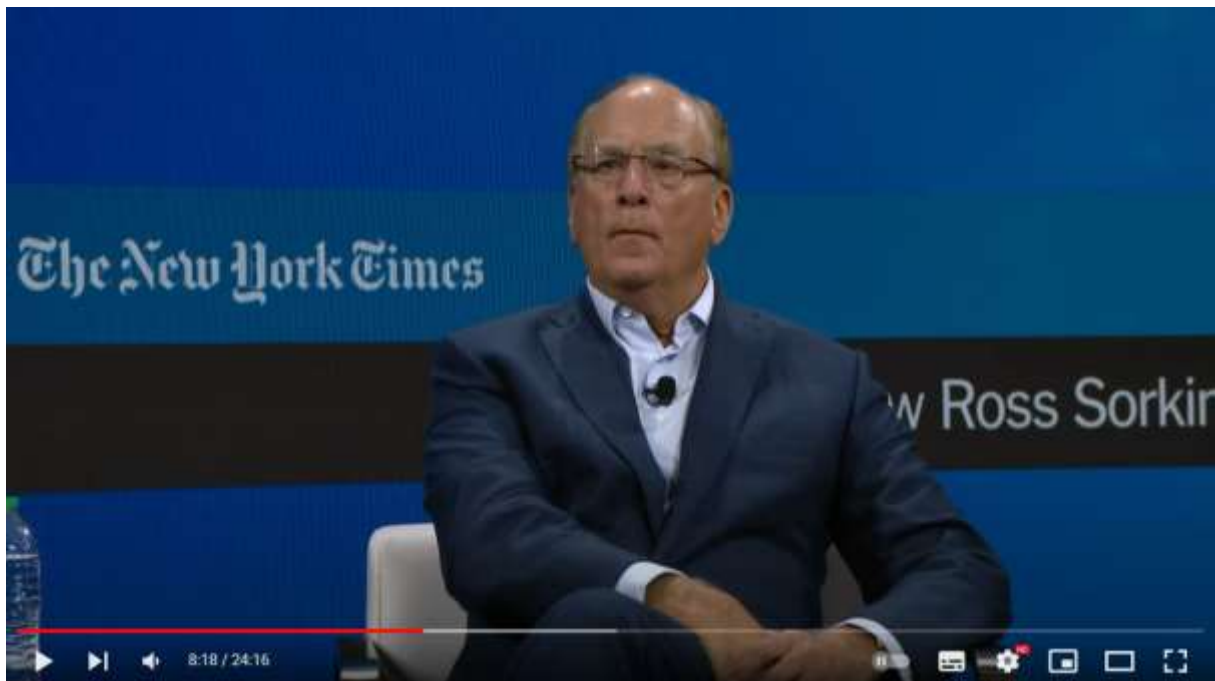

- **BlackRock CEO Larry Fink: The Next Generation for Securities will be tokenization of securities**
- **Tokenization of illiquid assets could lead to a market worth \$16 to \$68 trillion by 2030**
- **BNY Mellon: 97 percent of institutional investors believe that tokenization will revolutionize asset management and 91 percent want to invest in tokenized products**
- **Tokenization = the connection of a physical asset to a digital representation = RWA**
- **RWA's can be the next Big Crypto Narrative and lead to Crypto mainstream adoption**
- **Physical Asset + NFT Technology = Real World Asset**
